FLUID PHASE EQUILIBRIA

CONTENTS

(Abstracted/Indexed in: Curr. Contents/Eng. Technol. Appl. Sci. Curr. Contents/Phys. Chem. Earth Sci., Sci. Cit. Index, Phys. Abstr., ASCA, Geo Abstracts, GEOBASE)

Committees and Sponsors vii

Preface ix

Some new frontiers in chemical engineering thermodynamics
J.M. Prausnitz (Berkeley, CA, USA) 1–20

Application of fluctuation solution theory to thermodynamic properties of solutions
J.P. O'Connell (Charlottesville, VA, USA) 21–39

Theoretical studies of acetonitrile–water mixtures/Monte Carlo simulation
Y. Satoh and K. Nakanishi (Kyoto, Japan) 41–55

A procedure to generate ab inito intermolecular potential function
K. Kitaura (Osaka, Japan) 57–69

Intermolecular potential for oxygen
Y. Miyano (Okayama, Japan) 71–81

An approach for the extension of a 3-parameter cubic equation of state to heavy hydrocarbons
C.H. Twu, J.E. Coon and J.R. Cunningham (Brea, CA, USA) 83–96

The systematic study of phase behaviour and the emerging coherence of phenomena
J. De Swaan Arons (Delft, Netherlands) 97–118

Swelling equilibria of poly(N-isopropylacrylamide) gel in aqueous polymer solution
T. Ishidao, M. Akagi, H. Sugimoto, Y. Onoue, Y. Iwai and Y. Arai (Fukuoka, Japan) 119–129

Phase behavior of the binary refrigerant mixtures HCFC22-CFC12 and HCFC22-HCFC123
H. Nishiumi, S. Kohmatsu, T. Yokoyama and A. Konda (Koganei, Japan) 131–143

Molecular simulation of simple fluids and water in porous carbons
M. Maddox, D. Ulberg and K.E. Gubbins (Ithaca, NY, USA) 145–158

A direct method for determination of chemical potential from osmotic molecular dynamics simulations
R.L. Rowley, T.D. Shupe and M.W. Schuck (Provo, UT, USA) 159–171

Partial specific quantities computed by nonequilibrium molecular dynamics
B. Hafskjord and T. Ikeshoji (Trondheim, Norway) 173–184

Monte Carlo simulation of phase coexistence for polymeric and ionic fluids
A.Z. Panagiotopoulos (Ithaca, NY, USA) 185–194

Simulation of phase equilibria for chain molecules
J.J. de Pablo (Madison, WI, USA) 195–206

Liquid–liquid equilibrium calculations with excess Gibbs energy models based on the renormalization of Guggenheim's canonical partition function
W. Wang and J.H. Vera (Montreal, Que., Canada) 207–228

Continuous thermodynamics for polydisperse polymer solutions
Y. Hu, X. Ying, D.T. Wu and J.M. Prausnitz (Shanghai, China) 229–252

Prediction of high-pressure vapor–liquid equilibria using ASOG
K. Tochigi (Tokyo, Japan) 253–260

Vapour–liquid–solid equilibria in the system NH_3–CO_2–H_2O from around 310 to 470 K: new experimental data and modeling
F. Kurz, B. Rumpf and G. Maurer (Kaiserslautern, Germany) 261–275

0378-3812/95/$09.50 © 1995 – Elsevier Science B.V. All rights reserved

Computer simulation of aqueous electrolyte solution/metal interfaces
K. Heinzinger (Mainz, Germany) 277–289
Structural study of supercritical carbon dioxide by neutron diffraction
R. Ishii, S. Okazaki, O. Odawara, I. Okada, M. Misawa and T. Fukunaga (Yokohama, Japan) 291–304
Monte Carlo simulations of adsorption in slitlike pores for binary mixtures of butane and carbon dioxide at supercritical condition
T. Okayama, J. Yoneya and T. Nitta (Osaka, Japan) 305–316
Molecular dynamics study on solvent clustering in supercritical fluid solutions based on particle radial kinetic energy
C.C. Liew, H. Inomata and S. Saito (Sendai, Japan) 317–329
A novel approach to the stability of clathrate hydrates
H. Tanaka (Kyoto, Japan) 331–340
Calculation of the thermodynamic properties of model mixtures by Monte Carlo simulation
I. Fujihara and K. Nakanishi (Osaka, Japan) 341–348
Monte Carlo simulation of fluoro propane
R. Yamamoto, O. Kitao and K. Nakanishi (Kyoto, Japan) 349–361
Molecular design of polymer membranes using molecular simulation technique
Y. Tamai, H. Tanaka and K. Nakanishi (Kyoto, Japan) 363–374
Computer simulation of supercritical carbon dioxide fluid
J.W. Shen, K.B. Domanski, O. Kitao and K. Nakanishi (Kyoto, Japan) 375–390
High pressure solid–liquid equilibria and PVTx relationships for the 1-methylnaphthalene-indole system
C. Yokoyama, T. Ebina and S. Takahashi (Sendai, Japan) 391–402
Monte Carlo simulation of solubilities of naphthalene in supercritical carbon dioxide
Y. Iwai, Y. Koga, Y. Hata, H. Uchida and Y. Arai (Fukuoka, Japan) 403–412
Isobaric specific heat capacity of difluoromethane at pressure up to 0.5 MPa under high pressure
H. Kubota, T. Sotani and Y. Kunimoto (Kobe, Japan) 413–419
Molecular dynamics of flexible molecules: torsional motions of n-butane and ethylene glycol
H. Hayashi, H. Tanaka and K. Nakanishi (Kyoto, Japan) 421–430
Molecular simulation of evaporation and condensation
M. Matsumoto, K. Yasuoka and Y. Kataoka (Nagoya, Japan) 431–439

Subject Index 440–441
